

IT Senior Lead Business Applications

North America

This position will play an important role in the global IT team and will be working in a highly dynamic, fast changing and fluid work environment.

The job:

We are seeking a talented individual for leading the development and support of the business applications in North America - a combination of corporate and local applications. The major application used in North America is Dynamics NAV. The role will be responsible for 200 users in North America primarily based in the Corvallis area, Oregon and in Lindsay, Canada.

In the first year of employment the Business Application Lead will be responsible for two larger NAV implementations to move all North American users to the same ERP platform.

The Business Application Lead is a member of the Corporate Business Application team and will bridge internal business customers and functional IT teams to architect processes and identify the best solution to meet the business needs. The role will also serve as 1st level support in existing solutions and will work closely with the global service desk in Europe to solve critical issues.

The ideal candidate has a good business understanding, and is independent and goal oriented.

Preferred Qualifications:

- Experience with implementing ERP, including functional knowledge (Dynamics NAV/AX/ Oracle /PeopleSoft, SAP) and full lifecycle initiatives
- Experience with and a deep understanding of ERP business processes
- 8+ years of experience in the following areas: Business Process Re-engineering, Business Analyst, setup and support of Business Intelligence solutions
- ERP configuration experience supporting large programs or initiatives
- Ability to execute basic SQL queries against various database structures and basic understanding of systems integration and infrastructure technologies

The position will be placed in DLF's US headquarter in Halsey, OR, but travel to all DLF's North American sites is required.

Application:
