

ANURAD

Lolium perenne

- One of the highest quality scores under the Irish frequent cutting regime
- A reliable grazing variety with good utilisation
- Excellent spring growth
- Consistent growth throughout the season

One of the highest quality scores under the Irish frequent cutting regime

In a grazing system spring growth is extremely important as spring grass has the best quality. A variety like Anurad that produces high yields in spring can greatly improve farm profitability.

The high quality of Anurad ensures maximum grass utilisation by the cow – grass utilisation is the key to livestock performance.

A reliable grazing variety with good utilisation

Late Tetraploid varieties like Anurad are proven to have better quality than Diploid varieties due to larger leaf size and more digestible material. Anurad ranks among the best varieties for quality.

Excellent spring growth with consistent growth throughout the season.

Technical Specifications

- Perennial ryegrass
- Anurad - an excellent quality late tetraploid
- Listed/recommended in EU NL

Pasture profit index PPI for late tetraploids (4n)
