

HAMMON

Trifolium pratense

- High yielding
- Good persistence
- Competitive
- Excellent disease resistance

All-rounder Hammon

No special highlight to talk about within Hammon, just a very stable and good overall agronomic performance.

That is what a really good variety has to have, performing on a high level everywhere and with no weaknesses.

Quite persistent

Persistence and winter hardiness are important for red clover to keep it as long in the sward as possible. Hammon provides these characteristics to a high degree.

Swizz results also say that Hammon is competitive which is to understand the way that it can defend its place in a mixture with grass and is able to grow evenly together with the grass.

Attractive in terms of a good general impression

General impression stands for a quality rating, scored in Switzerland and creates a kind of exclusivity for Hammon.

“Precise good quality variety proved in Switzerland”.

Technical Specifications

- Red clover
- Good and stable tetraploid red clover!
- Listed/recommended in EU CZ

Hammon: Good agronomic value

Swiss trials 2011-13, Scale: 1 = very high, very good; 9 = very low, very poor

	Yield	General Impression	Juvenile Development	Competitive Ability	Persistency	Winter Conditions	Antracnose	Leaf Diseases	Index
Standard	7,0	4,5	3,3	5,4	7,2	6,2	2,6	2,3	4,9
Hammon	6,1	3,9	3,4	5,2	6,6	5,9	2,4	2,5	4,55
