

RHIZING MOON

Festuca arundinacea

- Low maintenance needs
- Dark colour
- Superior lawn quality
- Healthy, with very good red thread tolerance

Vigorous tillering

Rhizing Moon is a superior tall fescue whether management is low or high input. You can expect a dense and well performing sward for lawn, park or traffic areas. Its ability to recover from damage is due to vigorous tillering leaving little opportunity for weeds to settle.

Withstands stress

International independent turf trials place Rhizing Moon as a modern tall fescue variety, performing well during heat, drought, full sun as well as shade and common disease attacks. Remark the good red thread tolerance - less frequent in tall fescue, but it can decrease visual merit seriously. Brownpatch tolerance is also at a very good level.

Dark colour & dense

Rhizing Moon is a very dark green, medium-fine textured, high density tall fescue with superior performance.

Technical Specifications

- Tall fescue
- Low maintenance - high performance!
- Listed/recommended in EU CZ
