

SCAPINO

Lolium x boucheanum

- +7% total annual yield
- Very wide spring window, intermediate heading
- Excellent lodging tolerance
- High disease tolerance

Wide spring window for highest security

With +5 days compared to the 4n standard varieties, SCAPINO keeps a high forage quality for a very long time in the spring.

This "spring window" avoids being overwhelmed and end up with stemmy, poor nutritional forage.

Lodging tolerance

There is an extra security due to the very good lodging tolerance.

Significant yield gain

+7% more drymatter compared to the tetraploid standard varieties is a genetic progress synonymous of profit. With the same production cost, produce more!

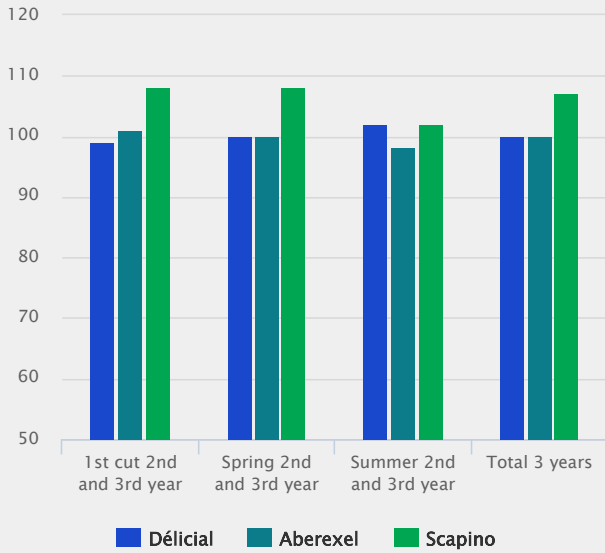

Technical Specifications

- Hybrid ryegrass
- Intermediate/Italian type
- Listed/recommended in EU FR
- Lateness: Intermediate
