

# SILVESTER

Trifolium repens

- High yield of forage
- Very winter hardy
- Suited for cutting and combined management
- Excellent forage quality

## Large production under cutting

Silvester is a large leaved variety of white clover, selected for its erect growth and ability to fit well together with tall growing grasses in mixtures. Silvester is able to produce a large amount of forage under cutting, but can of course also be used in mixtures for grazing.

## Good forage quality

Silvester has a good and early spring growth, a high tolerance to Sclerotinia and a low content of cyanide (HCN), enhancing forage quality.

## Very winterhardy

Silvester has shown a remarkable winter hardiness - the best variety in trials 2010-11 under severe frost and snow.

## Especially suited to cutting

Silvester has high persistency and is recommended for medium-long term mixtures used for cutting or combined management.

## Technical Specifications

- White clover
- Winterhardy and productive
- Listed/recommended in EU AT DE DK LU NO PL RU UK
- Leaf size: Large

## Yield, relative t DM/ha (Simulated Grazing) and Feed Units/ha (Silage cutting).

### High yield of forage in Danish Farmers Union Trials
