

DLF Alfalfa

DLF Alfalfa is the forage solution for you who want protein self-sufficiency, reliable and profitable farming - now and in the future!

- Increased self-sufficiency with 18-20% protein
- Higher feed intake and improved digestibility
- No need to fertilise as alfalfa provides a N-fixation of up to 250 kg/ha/year
- 5% yield increase in subsequent crop
- Drought tolerance secures forage production during dry periods
- Essential fibres, nutrients and vitamins give healthy animals
- Good for the environment

Start growing your return today!

Combine DLF Alfalfa with grass for optimal energy-to-protein ratio

DLF Alfalfa is a good partner for forage grasses. By sowing DLF Alfalfa-plus-grass seed mixtures, you achieve an optimal ratio of energy to protein. DLF Alfalfa's drought tolerance secures forage growth through the driest periods of summer.

Science improves DLF Alfalfa

DLF plant breeders are continually improving variety performance. Our DLF Alfalfa-breeding programme has made particularly good progress and has improved yield, protein content, disease tolerance, persistency, standability and digestibility. It is now easier for you as a farmer to grow a successful alfalfa crop.
