

BECVA

Festulolium

- Festulolium type Italian ryegrass
- Intermediate heading with very high productivity
- Top quality forage
- High content of water soluble sugar

Result of interspecific crossing

BECVA is the result of an Italian ryegrass crossed with a tall fescue and backcrossed several times to the Italian parent. The result is an appearance like an Italian ryegrass with improved characteristics.

Very high DM yield

+8% higher dry matter production was the result of the official Czech testing, compared to the Italian ryegrass standard variety LOLITA.

Top forage quality

With a good disease resistance (rusts) and a high sugar content, BECVA produces forage of very high nutritional quality.

Technical Specifications

- Festulolium
- Exceptional yielding capacity
- Listed/recommended in EU
CZ SK
- Lateness: Intermediate
