

BOND

Lolium multiflorum

- Fast growing diploid
- High yield from first cut
- Few stems in regrowth
- Optimal for temperate and mild climate

Fast establishing diploid Italian ryegrass

BOND is a fast establisher and will return a high yield already in the first cut, followed by a very good regrowth.

A good overall yielder

BOND is well adapted to temperate and mild winter climate.

It has a low tendency to stem formation in regrowth and it together with good rust resistance the quality will be kept high.

BOND shows excellent disease resistance in international trials.

A stable and disease resistant forage source for both silage and fresh consumption. This makes BOND an excellent all round choice.
