

CANNAVARO

Festuca arundinacea

- Super wear tolerance in the summertime
- Improved winter appearance
- Top quality for sports, lawn and ornamental use
- Deep dark fresh green colour

New generation

CANNAVARO proves that it is still possible to significantly improve the Tall fescue species. Outperforming the reference variety Montserrat; we are simply talking about a new generation!

Fineness and density

In particular for density and fineness, the superiority of CANNAVARO compared to the previous generation is evident; without losing anything for the remaining characteristics.

Mixtures

The default mixing partner would be smooth-stalked meadow-grass. Mixtures also containing perennial ryegrass: Maintain the ryegrass share at a low level. Prefer tetraploid turf perennials when possible.

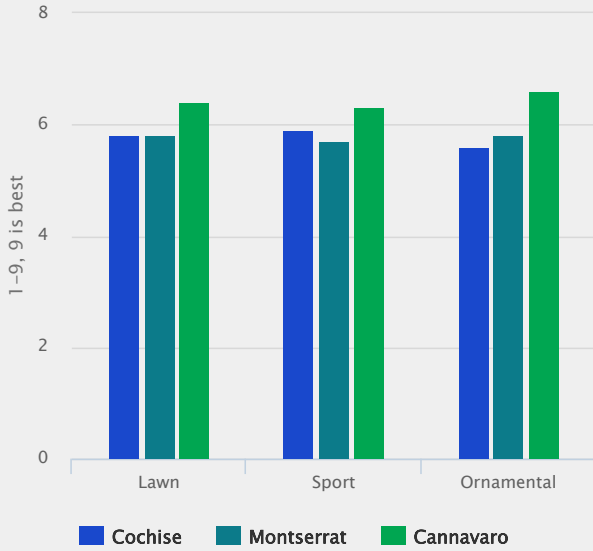

Technical Specifications

- Tall fescue
- Very dense and fine - deep dark green colour
- Listed/recommended in BY RU
