

CASANOVA

Festuca commutata

- Very dense
- Slow regrowth
- Good disease resistance
- Nice appearance during winter

Casanova

It is a lawn type variety with very good quality especially for all-purpose lawns.

Dense turf

Casanova creates a very dense turf with a nice and stable middle green appearance all over the year. There is not much difference between the winter and the summer appearance of Casanova. It has quite a good disease resistance against the major lawn diseases.

Low growth

Interesting is, that Casanova shows very limited secondary growth after cutting means it helps to lower the cutting frequency.

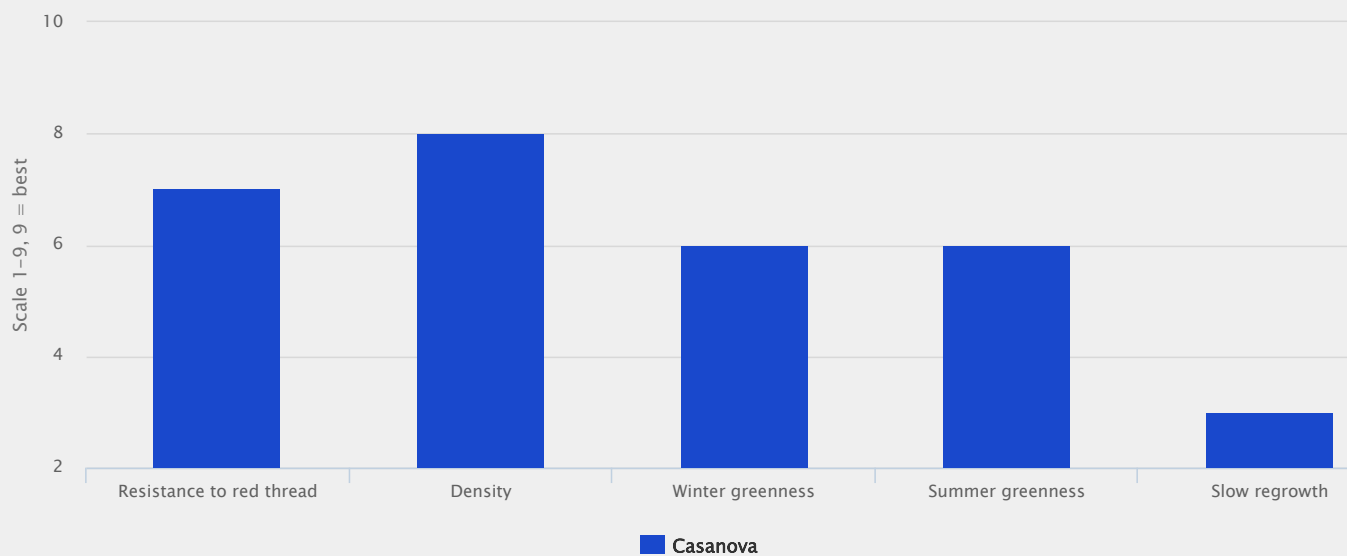

Technical Specifications

- Chewings fescue
- A Gentleman to the lawn
- Listed/recommended in EU
