

CHLOE

Lolium perenne

- Slow growing - reduced need for mowing
- High wear tolerance for both winter sport and close mowing
- Visual merit, including fineness and density is high
- Good overall disease tolerance
- Good summer appearance in drier conditions

Slow growth - sustainable

Despite being well adapted to wear exposure, CHLOE manages to perform with reduced vertical growth rate.

This means less clippings and less frequent mowing.

Performance under dry conditions

Dry summers are more and more frequent and the need for varieties with lower need for irrigation or the ability to stay green are gaining interest.

CHLOE is one of those!
