

# CLEEK

*Agrostis capillaris*

- Top performance on greens in STRI (UK) and Scangreen network
- High tolerance to several important diseases
- Winter hardy and good winter colour
- High performance for fairway use too

## 4salt

### Top performance!

CLEEK is out of European breeding with a wide genetic background offering excellent green performance in Scandinavia and confirms the high level in STRI close mown trials.

### Disease tolerance

One explanation for the top ranking in Scandinavian trials is certainly the good resistance to a range of diseases combined with density and fineness. CLEEK manages to keep a good winter colour and still maintain a good winter hardiness.

### Adapted to greens and fairways

The STRI trials also perhaps very good performance for use on tees/fairways (trials cut 10-15 mm).

### Salt tolerance

CLEEK turned out as one of the better in our salt tolerance trials (coastal areas, irrigation water with salinity...).

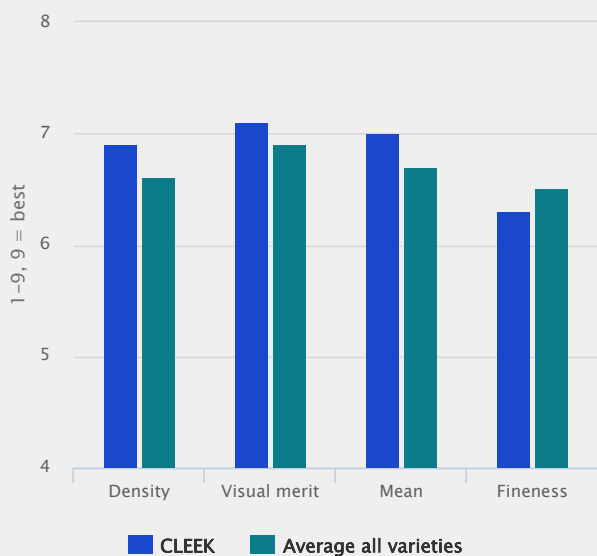

## Technical Specifications

- Browntop bent
- Top ranked for use on golf greens - Excellent disease tolerance
- Listed/recommended in EU CZ UK

## Specification and ratings

### Performance in close mown trials (4-7mm)
