

CRENO

Medicago sativa

- Winterhardiness geared for optimal forage production
- High protein content and yield
- High tolerance to common alfalfa diseases
- Overall high forage quality

CRENO - Strong Heritage

CRENO is an improvement of our well known DAISY, enlarged with other genetic sources – with higher protein content, total yield and notably a better winterhardiness.

Verticillium Resistance

Compared to the standard variety Europe, CRENO shows higher protein content, finer stems and better Verticillium resistance. For Verticillium the score of CRENO is 1,09 with 1,57 for Europe (1=resistant).

Quality From A to Z

The combination of fine stems, high protein content and disease resistance is an excellent basis for supply of high quality forage.
