

DEXTER 1

Lolium perenne

- One of the best intermediate varieties
- High yield especially in the first cut
- Very good winter hardiness
- Lowland (Moor) recommended

Top level tetraploid variety

DEXTER 1 is a high-class variety of intermediate maturity with the main advantage being the early spring growth and high yield in first cut.

In total, DEXTER 1 delivers an unusually high yield within this maturity group.

Additionally, DEXTER 1 proves an enormous endurance, good sward density and unusual winter hardiness, which has been rewarded with the famous "M" during the lowland (moor) test by the North West German Chambers of Agriculture.

DEXTER 1 provides all what you demand from a modern ryegrass variety
