

DOMINO

Lolium multiflorum

- Super lodging resistance
- Very good rust resistance
- Regular high yield of dry matter
- Broad adapted confirmed variety

Biannual

Domino has shown wide adaptation with good performance in many regions across the world from Europe to South America.

Keys to success

Domino reaches this degree of adaptation for two main reasons: High regular yield of drymatter and excellent disease resistance, in particular to crown rust.

Top quality forage

The excellent lodging resistance gives flexibility and allows harvest of the crop with maximum feeding quality.

Technical Specifications

- Italian ryegrass
- Highly productive and disease resistant
- Listed/recommended in EU FR
- Lateness: Intermediate

Main characteristics of Domino

Source: Off. trials in France

	Domino	Lipo	Scale
Heading date	13/5	13/5	date
Stems sowing year	1.3	3.6	1=few
Stems in regrowth	5.1	6.6	1=few
Rust	3.7	4.9	1=res.
Dreclera leafspot	3.6	4.3	1=res.
Lodging	1.7	2.0	1=res.
Persistency end 1st / 2nd year	6.5 / 5.5	5.9 / 5.4	9=high
