

# EMERAUDE

*Festuca arundinacea*

- Intermediate heading date
- Palatable and healthy year-round
- Highly persistent
- Fine tolerance to spring frost

## Performance in Spring

EMERAUDE starts growing early in the spring and supports cold periods after growth start.

## Heat and Drought Tolerant

The high yields obtained in the spring is followed by a good growth through summer and autumn with much higher potential than ryegrasses due to heat and drought tolerance – a good reason to consider EMERAUDE as a mixture partner.

## Resistant to Rust and Palatable

EMERAUDE fights well against the principal threat – crown rust – and remains green preserving yield potential and palatability. EMERAUDE has shown fine palatability in grazing trials.

## Technical Specifications

- Tall fescue
- Green Precious Grass...
- Listed/recommended in EU  
BE
- Lateness: Intermediate

## Characteristics

Source: Off. French Trials - Geves (France)

	<b>Emeraude</b>	<b>Barcel</b>
<b>Rust</b>	5,8	4,7
<b>Cold</b>	6,4	5,6
<b>Softness of leaves</b>	6,1	7,1
<b>Palatability</b>	4,7	4,5

## Characteristics
