

GREENLIGHT

Festuca trichophylla

- Top visual merit during summer
- Nice fresh green colour
- Excellent tolerance to frequent diseases
- High salt tolerance

4salt

Confirmed performance in summer

The strong point of slender creeping red fescues is the good summer visual merit. Greenlight confirms this and is even well above average.

Excellent disease tolerance to common diseases:

Rusts, Leaf spot, Pink snow mold and Red thread disease.

And as an extra "+" excellent salt tolerance

In our hydroponic tests, GREENLIGHT came out as one of the very best in terms of salt tolerance. It adds up to the already good performance of slender creeping red fescue in general.

This can be of great importance for:

- Lawns and turf in coastal areas (golfs...)
- Road sides frequently deiced with salt
- Irrigation with recycled water etc.

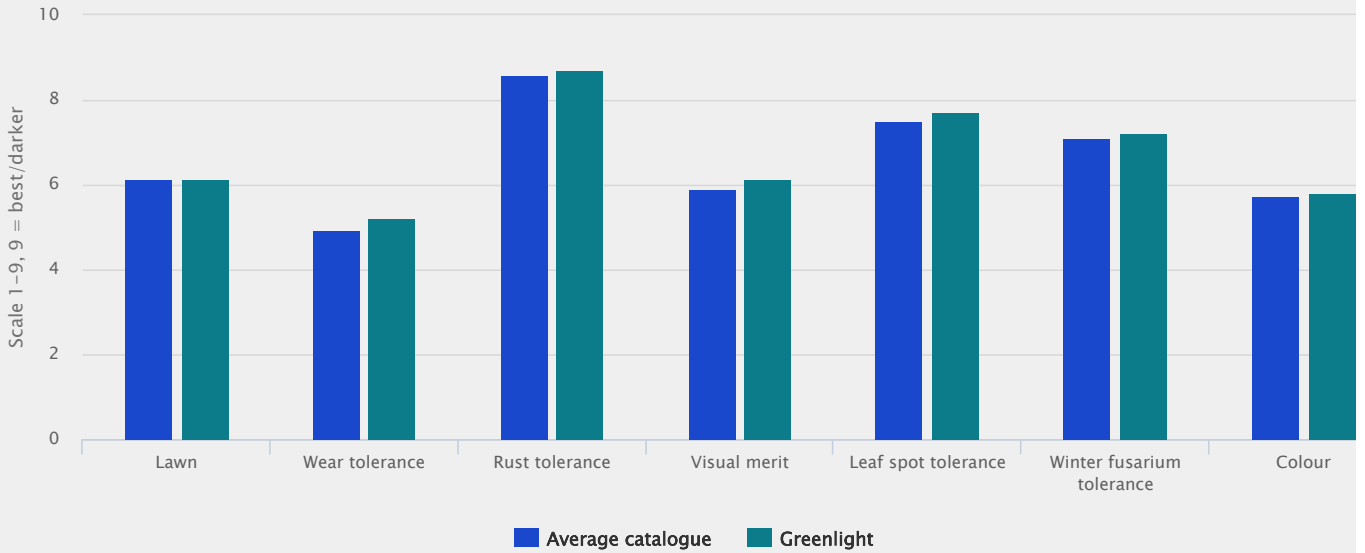

Technical Specifications

- Slender creeping red fescue
- Merge esthetics with performance in lawn and sport use
- Listed/recommended in EU
