

# HEIDRUN

*Festuca rubra rubra*

- Very fast establishment!
- Improved traffic tolerance
- Very high shoot density
- Above average salt tolerance

## 4salt

### Easy establishment

Red Fescue in mixtures is often suffering from a slower establishment rate than perennial ryegrass. HEIDRUN performs better and will also perform better in repair/overseeding mixtures.

### Improved wear tolerance

Strong creeping red fescue has average wear tolerance, but through breeding improved performance is observed with HEIDRUN. Appreciated on playgrounds!

### Very high shoot density

Red fescue is fine and dense - nevertheless we added a little more density. Few chances for any weed to find room...

### Higher salt tolerance

In our salt tolerance trials HEIDRUN has shown performance above the average for the species.

### Technical Specifications

- Strong creeping red fescue
- Fast establishing with excellent density
- Listed/recommended in EU
