

INDIANA

Lolium perenne

- Early to intermediate heading
- Very rust resistant
- Equal, even yield distribution
- Very good performance

Vigorous as no other Variety

The rust resistance is outstanding. When other varieties suffer from rust attacks, INDIANA still looks healthy in french trials. This is also proved by very good scores in official trials in Germany.

Yield Guarantor

INDIANA starts early in the spring with a high green mass production and keeps this potential over the whole growing season - a DM – yield of rel. 112 is recorded. Further cuts are also high. This means INDIANA reaches yields far above standards.

Usage

Is specially recommended to locations with a high disease pressure. Due to the top yields - INDIANA is the very best partner for mixtures for high yielding pastures for dairy farms.

Technical Specifications

- Perennial ryegrass
- Healthy and High Yield Potential!
- Listed/recommended in EU BE NL
- Lateness: Intermediate
