

ITARZI

Lolium multiflorum

- Very persistent for an Italian ryegrass
- Reduced aftermath heading
- High yield of DM in spring as well as summer/autumn
- Few stems in sowing year

Persistence close to a HRG Italian type

The continuum "ryegrass" has no frontiers and ITARZI is located close to the level of Italian type hybrid ryegrass (HRG) in terms of persistency. This is a plus in terms of choice of use for short or longer duration.

Few stems!

Both in the sowing year and in the aftermath after each cut, ITARZI produces very few stems. ITARZI is going for quality!

Rust resistance is excellent!

Excellent total yield

As it should be for an Italian ryegrass, the DM yield is very high right from the spring to ensure a high quantity and quality whether used for:

- Silage
- Hay or
- Grazing

Technical Specifications

- Italian ryegrass
- Very persistent, productive and with quality (few stems)
- Listed/recommended in UK
- Lateness: Intermediate

Quality factors and persistency

Source : herbe-book.org, France 2012

	Stems in sowing year	Aftermath heading	Persistency
Average all 4n varieties	1,7	5,5	6,9
Itarzi	1,2	4,5	7,2

1-9, 9=stemmy, very persistent

Yield distribution

	Yield spring	Yield summer/ autumn	Yield total
Average all 4n varieties	12,8	3,5	15,2
Itarzi	12,8	3,7	15,3

Yields are in t/ha dry matter

Ratings

Scale 1-9, where 9 = best or most pronounced
