

KETARION 1

Lolium perenne

- Diploid and late heading
- Persistent
- Dense sward
- Excellent rust tolerance

Combines rust resistance and high yield

KETARION 1 is a late diploid with high first cut and a high tolerance to rust. The charts below confirm the high level of disease tolerance, dense sward and good cold resistance.

Late heading but still high yielding

The combination of a total high dry matter yield, with a particular very high yield of the first cut and excellent rust resistance, KETARION 1 is the basic for optimal forage supply in quality and quantity.

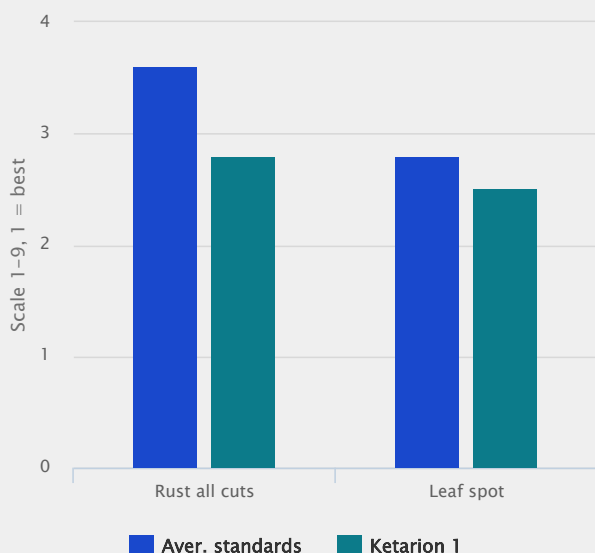

Technical Specifications

- Perennial ryegrass
- All that a Perennial Ryegrass needs...
- Listed/recommended in EU NL
- Lateness: Late

Specification and ratings

Very high tolerance to rusts
