

MEGALIC

Trifolium pratense

- High dry matter yield potential
- High protein content in the first cut
- Exceptional persistency in colder climates
- Great balance between yield and quality
- Excellent disease resistance

Outstanding protein yield

If you're looking for a clover variety that can deliver high protein yields, Megalic is your answer. This variety of red clover has already made a name for itself in France and Germany, where it is highly recommended for forage purposes. In France, Megalic is ranked as one of best variety available.

Improved and recommended for first cut

Megalic delivers outstanding potential of dry matter yield and the performance is outstanding in the first silage cut, and this reason you will gain extra protein and improve your forage quality.

Moreover, in colder climates like Germany, Megalic boasts of an exceptional level of persistency, making it possible to reap a bountiful yield for many years to come.

Why Choose Megalic?

For farm owners who require a reliable forage crop that provides consistent and high-yielding performance, Megalic is the perfect choice. Not only does it produce high protein silage in the first cut, but it also has great persistency in colder regions, giving you prolonged harvests for years on end.

In addition, Megalic offers an excellent balance of yield and quality, ensuring that your livestock receives optimal nutrition from every cutting. It also ranks high in disease resistance, meaning you won't need to invest in expensive pesticides or fungicides to keep your crop healthy and productive.
