

MILAGRO

Trifolium repens

- Very high yield of forage
- Large leaves
- Good tolerance to Sclerotinia
- High persistency

A clover built for large production

Milagro is a large leaved variety of white clover, selected for its erect growth and ability to fit well together with tall growing grasses in mixtures.

Fine forage quality

Milagro has a good and early spring growth, a good tolerance to Sclerotinia and a low content of cyanide (HCN) - a benefit for the forage quality.

Yield is at top

Milagro has proven the ability to produce high amounts of forage under cutting for simulated grazing as well as for silage.

Use

Milagro has high persistency and is recommended for mixtures used for cutting or combined management.

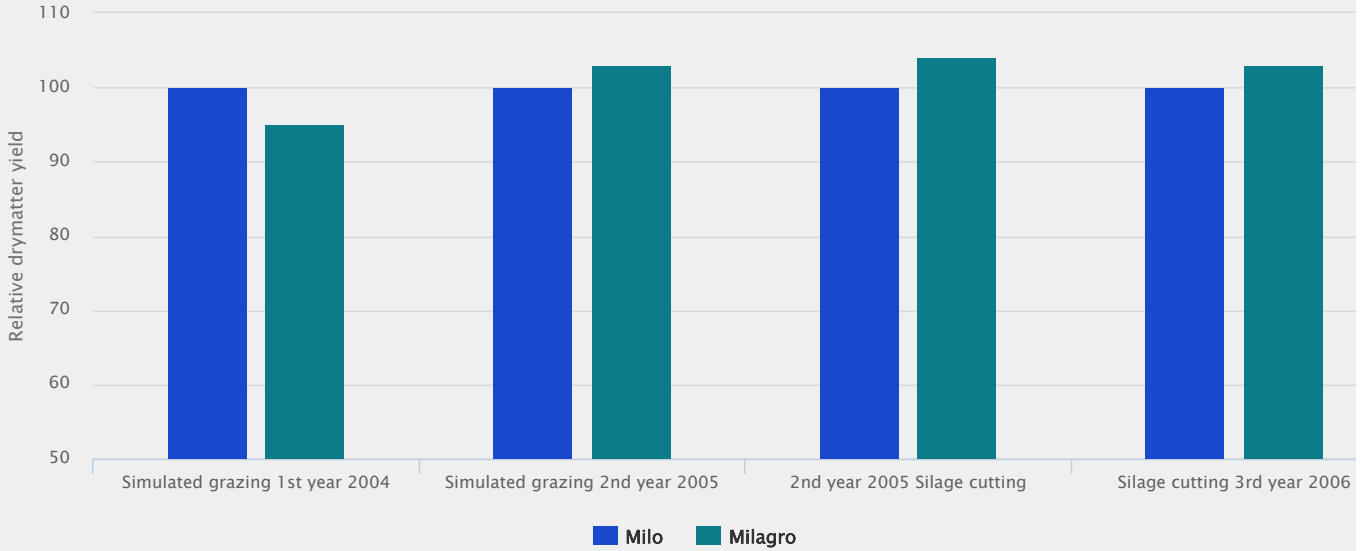

Technical Specifications

- White clover
- Yield and persistency
- Listed/recommended in EU
DK FR UK
- Leafsize: Large

Specification and ratings

High yield under various managements
