

NIVA

Dactylis glomerata

- Excellent cold tolerance
- Very good persistency
- Intermediate heading date
- Palatable

Easy!

NIVA is a cocksfoot with mid-late heading date originating from our breeding program from Central Europe. It has improved disease tolerance and yield. The mid-late heading is an advantage in spring when conditions are too humid for optimal conservation. The yield is "early" but easy to master.

In mixture with alfalfa

Mixing NIVA with alfalfa is perfect because of the synchronized growth of the two species.

Cold tolerance

NIVA has excellent cold tolerance / winterhardiness and the leaves resist very well to cold after the spring growth has initiated.

Technical Specifications

- Cocksfoot/Orchard grass
- Tough and palatable
- Listed/recommended in EU CZ SK
- Lateness: Intermediate

Seeding rate

Goal: Minimum 4/5 leaves before first frost.

Establishment of cocksfoot	kg/ha
Pure stand :	15 à 20
Cocksfoot + alfalfa :	12 & 15

Ratings

Scale 1-9, where 9 = best or most pronounced
