

PELETON

Lolium westerwoldicum

- High DM production
- Very lodging resistant
- High forage quality
- Tetraploid genetics

Allows late autumn sowings

The fast growth of PELETON allows late sowing in the autumn enhancing chance of successful establishment.

Good lodging resistance

If harvest is delayed due to weather the good lodging tolerance will be highly appreciated. Quality in view!

Excellent production of drymatter

The total annual drymatter yield is very high and of very good forage quality.

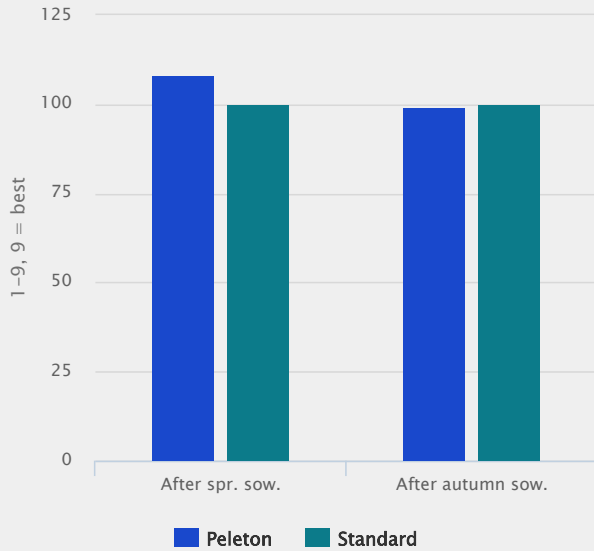

Technical Specifications

- Westerwold/annual ryegrass
- A true "annual ryegrass"
- Listed/recommended in EU
CH EST LU RU UK
- Lateness: Late

Specification and ratings

Drymatter yield, standard average = 100
