

# PIPOLINA

Trifolium repens

- Saves nitrogen fertiliser
- Securing a green lawn right from spring to autumn
- Very healthy lawn
- Very even and good ground cover

## Beautiful Dark Green Colour the Whole Season

Microclover® takes care that the companion grasses are well feed with nitrogen which makes them look great. At the same time the Microclover® itself has a nice darker green colour and together this gives the lawn the most beautiful darker green colour right from spring to autumn. It is recommended to include Microclover® in the seed mixture with 5% by weight.

## Improved Drought Tolerance

Inclusion of Microclover® in the grass mixtures has the effect that the soil is shaded a bit more and moisture is retained more in the dry summer. The deep green colour also sustains the overall lush appearance of grass through difficult drought periods.

## Very Healthy Lawn

The "spoon feeding" of the grasses with nitrogen from Microclover® secures a nice and more even growth of the grasses in the mixture. The vital growth keeps the grasses healthy and free of diseases.

## Technical Specifications

- White clover
- It cannot be more Green!!
- Listed/recommended in EU  
BA BY DE RU UK
- Leafsize: Very small

Successful overseeding of pure grass with Microclover®
