

POWER 4.2

Medicago sativa

- Track record of top of test yield
- Dense, leafy canopy
- Wide geographic range adaption
- Strong persistence

Description

Power 4.2 is a robust lucerne variety with a dense, leafy canopy. Foliage colour is medium dark green. Fall dormancy group 4 ensures good winter hardiness.

High yield and strong persistence through a wide geographic range

Power 4.2 has shown top yields in various climatic conditions and the yield performance is maintained over years. Trials conducted at DLF research centres in Europe shows a competitive yield level under coastal as well as continental climate conditions.

High disease resistance

Power 4.2 is highly resistant to the most important lucerne diseases and with a good aphid resistance as well.

Add Power!

Add Power 4.2 to your crop rotation to optimize forage yield and quality.

Technical Specifications

- Alfalfa/Lucerne
- Powerful performance for today's forage grower
- Listed/recommended in EU BY IT
- Dormancy group 4
