

RABBANI

Trifolium repens

- High dry matter yield
- Early and rapid development
- Very good winter hardiness and persistence
- Leaf size = medium

Approved in Germany and Switzerland

The special features of RABBINI are the excellent Sclerotinia resistance and a low hydrogen cyanide (HCN) content (BSA Note 2).

Winter hardiness

The variety is winterhardy and durable and therefore well suited for the Alps. RABBINI is recommended on the Swiss list of white clover, and is identified as one of the best varieties with top rating for "cultivation suitability for altitudes" in Switzerland.

Yield distribution

Even yield distribution over the growing season, with an upward trend in the autumn, makes this new variety ideally adapted to the changed climate conditions in recent years.

Technical Specifications

- White clover
- Rabbani with low cyanide and high yield
- Listed/recommended in EU AT DE

Rabbani Results Swiss Testing

Results 2010-12 medium to small leaved varieties. Scale 1 = very high or good; 9 = very low or bad

	Yield	Quality	Early vigour	Persistency	Adaptation to higher altitudes
Standard	5,2	3,2	3,6	3,6	3,6
Rabbani	4,8	3	3,4	3,4	3,1

Ratings

Scale 1-9, where 9 = best or most pronounced
