

RIVENDEL

Trifolium repens

- Small-leaved
- Adapted to grazing
- Perfect for permanent pastures
- High disease tolerance

Variety Type

Trials show that small leaved white clover is most persistent in permanent pastures under a grazing management. RIVENDEL is a small-leaved very persistent variety. It has short rhizomes and short leaf growth, which makes it suitable for both cattle and sheep farming as it tolerates close grazing and maintains a high proportion of clover in the sward.

Winterhardiness

In several trials throughout Europe, RIVENDEL has shown its excellent resistance against strong and cold winter conditions.

Yield

RIVENDEL has a good distribution of DM yields throughout the season and years with high rel. yields compared to the standard variety in 3rd. and following years.

Disease Resistance

RIVENDEL has a good resistance to nematodes and clover rot (*Sclerotinia*), which also improves the persistence.
