

# TELSTAR

Lolium perenne

- Persistent
- Dense growing
- Early spring growth
- Winterhardy

## Big Yields

The strength of TELSTAR is the enormous green matter yield in the early spring, where it ranks at the top of the official German trials. The huge spring production helps the farmer in getting a large amount of forage into the silage clamp.

TELSTARs production potential remains over the whole growing period, shown as an improved yield of 4% more drymatter than the control varieties in the later cuts.

## No Winter Damage

TELSTARs high density and high frost tolerance are criteria's of high importance for persistency, winterhardiness and strong spring growth. Another important point is the good disease resistance of TELSTAR.

## Technical Specifications

- Perennial ryegrass
- Are you Looking for Top Yields?
- Listed/recommended in EU AT BY PL RU
- Lateness: Early

## Ratings

Scale 1-9, where 9 = best or most pronounced
