

TETRAGRAZE

Lolium x boucheanum

- Very persistent hybrid ryegrass with intermediate heading
- Best ground cover
- Excellent disease resistance
- A true grazing type of hybrid ryegrass

A hybrid with perennial properties

Tetragraze is a tetraploid variety of hybrid ryegrass with excellent ground cover and very high persistency. In fact it looks like a perennial ryegrass in many aspects, but still keeping the hybrid's early spring growth and fast regrowth.

High yield

The forage yield of Tetragraze is high - especially in the 3rd harvest year. This makes the variety well suited for medium-long term mixtures used for one or two cuts and grazing afterwards.

Very healthy

The resistance to crown rust and mildew is well above average - this of course adds to the good grazing properties of Tetragraze.

The best ground cover

On the BSPB recommended list for England & Wales, Tetragraze has the top rating for 3rd year ground cover of the hybrids listed - the persistency is on top.

Technical Specifications

- Hybrid ryegrass
- Dense and very healthy
- Listed/recommended in EU
DK UK
- Lateness: Intermediate

Ground cover and disease resistance

Recom. list England, NIAB 2011-12, 1-9, 9 best

	Ground cover	Crown Rust	Mildew
TETRAGRAZE	4,6	8	8
Average, recommended varieties	4,1	6	7

Relative yield, Drymatter/ha.

Recommended list England, NIAB 2011-12

	Yield 1st year	Yield 2nd year	Yield 3rd year
TETRAGRAZE	94	100	102
Average, recommended varieties	100 = 19,0 t	100 = 14,6 t	100 = 13,4 t
