

TODDINGTON

Lolium perenne

- Top combination of yield and rust tolerance
- Creates a nice and dense sward
- First cut emphasized
- Healthy and resistant

One of the best late heading diploid varieties you can get

Toddington is highly recommended if you are looking for a late diploid perennial ryegrass.

Currently the variety with the biggest first cut in the late diploid group. The yield of Toddington even tops the yield of tetraploid varieties. Thus, Toddington is one of the top varieties of the early late maturing group in terms of yield.

Healthy and resistant

Also the other agronomic characteristics are outstanding. Among them are the good resistance to leaf spot and particularly the outstanding rust resistance. Not only does Toddington surpass its competitors in the maturity group, it is also the best diploid variety in the late heading group at the time of approval in terms of rust resistance with a scour 3 (low is best) in Germany.

Technical Specifications

- Perennial ryegrass
- The all-rounder for your grassland
- Listed/recommended in EU DE LU UK
- Lateness: Late

Strong first cut
