

TOWER

Festuca arundinacea

- Yielding throughout the season
- Excellent disease tolerance
- High lodging resistance
- Early growth start with wide spring window

Early growth start and wide spring window

TOWER is ranked as one of the latest heading tall fescues with +3 or +4 days compared to the standards.

Outstanding disease resistance

TOWER has shown excellent disease resistance to all common diseases: crown rust, stem rust, leaf-spot, virus. This is an extra insurance to maintain high forage quality, palatability and persistency.

Breathtaking yield capacity

After an early start in spring TOWER continues growth all the season. +8% compared to standards - a true genetic progress.

Soft leaves

The improved softness level of the leaves does not compromise the rusticity of TOWER and allows excellent palatability.

Technical Specifications

- Tall fescue
- Impressive yield and wide disease resistance
- Listed/recommended in EU
BY FR RU UK
- Lateness: Late

Disease resistance on a scale from 1 to 9, 9 = most resistant

Source: GEVES (off. results France)

	Tower	Dulcia	Barolex
Various diseases	6,1	5,7	4,6
Crown rust	7	5,8	4,3
Stem rust	8,3	7,6	6,3
Various rusts	7,6	6,7	5,3
Dreckslera leafspot	7,5	7,9	7,3
Virus	8	6,3	2,3
