

VERSAMAX ROBUST

ForageMax

- Grazing under all conditions
- Highly productive
- Cold resistant
- Drought tolerant

VersaMax - Robust (Previously CoverMax)

For extensive winter-hardy pasture with highest wear tolerance and persistency to both dry periods and close grazing.

VersaMax - Robust is a really tough mixture to be used where stress tolerance is needed. VersaMax - Robust is designed mainly for permanent pastures, but is also very suitable for one or two early cuts of silage or hay.

VersaMax - Robust consists of species that combine ground cover, winter hardiness, drought tolerance and high productivity.

VersaMax - Robust is ideal, not only for cattle grazing but also for sheep and horses as it tolerates close grazing. The feed from VersaMax - Robust is palatable, but also supplies the animals with necessary fibre.

Seeding rate, KG/HA: 30-35

Technical Specifications

- VERSAMAX ROBUST
- Robust and Hardy

Versamax Robust

Duration: 3-6 years

Mixture Composition

White clover small leaved	5%
Perennial ryegrass intermediate tetraploid	30%
Smooth-stalked meadow-grass & timothy	10 + 10%
Red & festulolium type tall fescue	10 + 20%
Cocksfoot	15%
