

VIFELT

Lolium perenne

- Top yielding for grazing
- Excellent rust resistance
- Very early starter in the intermediate group
- Very good persistency and good winter hardiness

Early start for spring growth and intermediate heading

VIFELT consistently shows good results in both conservation and grazing, a regular yield during the season and very good agronomic behavior. VIFELT is a safe, flexible and polyvalent variety.

Disease tolerance and forage quality

A good persistency combined with an excellent rust resistance better than the average, you are also ensured that you have high quality feed and good yield all year round.

Strong tetraploid suitable for grazing

VIFELT has a good yield for cutting and even a better yield for grazing, which makes it suitable for different kind of mixtures.
