

GRAZEMAX H&D

Exceptional for intensive grazing

- High quality under dry conditions
- For intensive milk production
- 3-4 year duration
- Suitable for dry and hot areas

Ratings

Intensive Pasture

High Yield

High Protein

Fast Germination

Wear Resistant

GrazeMax Hot&Dry

GrazeMax Hot&Dry is made for hot and dry regions.

GrazeMax Hot&Dry is designed for the intensive short term pasture for hot and dry conditions providing good persistency and regrowth in regions with lack of rainfall. It is a mixture of tall fescue, white clover and hardy varieties of perennial ryegrass and can - even under dry conditions- produce a very high amount of quality feed for grazing animals.

Summer production is good and GrazeMax Hot&Dry should be renewed every 2-3 years.

GrazeMax Hot&Dry is recommended where high persistency combined with good forage quality is vital.

Seeding rate, KG/HA: 25-30
