

Perennial ryegrass

Top diploid variety with high yield

- Top yield under cutting and grazing
- Good disease resistance
- Excellent ground cover
- High persistence

Ratings

Boyne

Intermediate, diploid top variety with very homogenous yield ratings over the season, showing that Boyne has an evenly distributed and quite stable high yield throughout the year.

Evidence for high persistency is shown by the remarkable fact that yield increased over the three testing years in Germany from 104-107-112 relative to controls.

Resistance

Together with its high yield, Boyne also shows fine rust resistance, making you able to harvest high feeding quality summer cuts as well.

Very good DM yield of Boyne
