

Perennial ryegrass

Diploid, very late
Unique diploid, that performs in moorland!

- Proven persistency = long-lasting yields
- High ground cover
- Fast feed supply through high 1st cut yield
- "M" score - suitable on moorland

What does high yield security mean to you, even under tough conditions?

DONNER can fulfill this wish for you. As an improved diploid variety, it is extremely robust and even performs outstanding in moorland regions.

Yield security under harsh conditions

In Germany, DONNER has officially proven that it is robust and persistent. High yield security - this is what DONNER offers through its positive moorland suitability, winter hardiness and high persistence.

Robust and healthy

The DLF internally tested rust tolerance, has been confirmed in official trials (recommendation list and BSA national list). In addition to rust, DONNER has performed convincingly in the disease traits Fusarium and leaf spot over 3 years trials.

Profitable with high yields

In the very late maturity group 9, the yield strength of DONNER is especially in the 1st cut. DONNER provides you with noticeably high DM yields early on! - The 1st cut in the year is the most important.

Performance in Germany
