

Perennial ryegrass

High yield combined with a high digestibility. Diploid with few stems in regrowth.

- Few stems in regrowth
- High yield in all cuts
- High rust resistance
- A high groundcover

Ratings

EVOCATIVE gives a high quality combined with high yield.

The big advantage of this variety is the high yield combined with a high digestibility. Adding on the few stems in the regrowth EVOCATIVE is easy to graze.

For at late variety EVOCATIVE will give a high yield above average not only in the first cut, but also in second and third cut. EVOCATIVE has a great rust resistance and a high groundcover.

The yield is distinctively above average ryegrass. This means that it is a reliable variety that gives you not only a high yield but also a very high feeding quality. Due to the described good agronomic quality, EVOCATIVE can be used both for cutting as well as for grazing, where the high rust resistance and groundcover are beneficial.

With EVOCATIVE you are very flexible in how the field is utilized!

Yield when used for cutting or grazing
