

Perennial ryegrass

Fabiola is like a power bar

- Strong yielding variety especially in the first cut
- Good persistency
- Improved ground cover
- To deduce from the good groundcover low weed infestation

Ratings

High yield, high protein

Fabiola is very high yielding variety with the focus on the first cut. The German figure of a 108 relative for the first cut yield is a strong indicator. There is also evidence that Fabiola shows a higher protein yield compared to standards as its score in Austrian trials showed a 6% higher protein yield.

Typical nice and dense like a diploid variety

All other agronomic performances are on a high level. Highlight is a very low weed invasion, which helps to keep weeds out of the sward and reduces the weed control task. A good ground cover is probably a character someone would expect from a diploid variety and Fabiola is showing it.

Improved yield

BSA, 2016
(VRS=Checks)

	Total DMY	DMY 1. cut
Ø VRS	100	100
Fabiola	102	108

Nice groundcover and low weed infestation

BSA, 2016 (VRS=Checks)

	Ground cover	Weed infestation
Ø VRS	6,2	3,5
Fabiola	6,8	2,3
