

Festulolium

Top yield with high feeding value - Ryegrass type of festulolium

- Top performance in mixtures for cutting
- Early spring growth, intermediate flowering
- Good persistency
- High feeding value

Ratings

The better of two worlds

HOSTYN is a ryegrass type of festulolium - based on a crossing between italian ryegrass and meadow fescue. This results in a combination of high yield and good persistency.

Yield and Quality

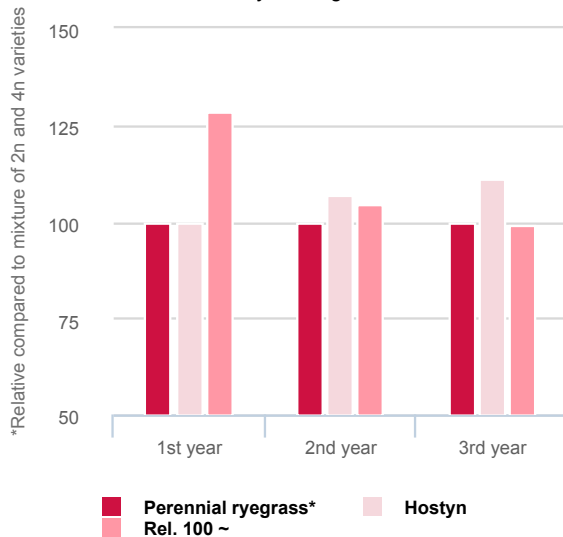

The yield of HOSTYN is high with relatively high sugar contents and good digestibility of organic matter.

HOSTYN is ideal for silage as pure crop or - even better - in mixtures with other grasses like perennial ryegrass, tall fescue types of festulolium and red clover. In such mixtures, HOSTYN delivers early spring growth, high forage yield and persistency, combined with very good feeding value.

HOSTYN has shown good resistance to rust, Dreschlera leaf spot and mildew.

Rel. yield NEL20, crop units/ha
