Ratings

Well-known confirmed variety

BALIN is one of the most used varieties of poa pratensis in Europe due to its reliability and tall growth.

Description

BALIN is medium early and gives high yields with strong growths in early spring as well as during summertime. BALIN is persistent and gives a high yield also in permanent pastures, where it competes well with other grasses being a rather tall growing variety.

Resistance and Winterhardiness

BALIN has a good resistance to the common diseases of Poa pratensis.

The winterhardiness has been proved in the alp region where BALIN is one of the most important varieties.

Yield over four years
