

TUSCANY

Festuca arundinacea

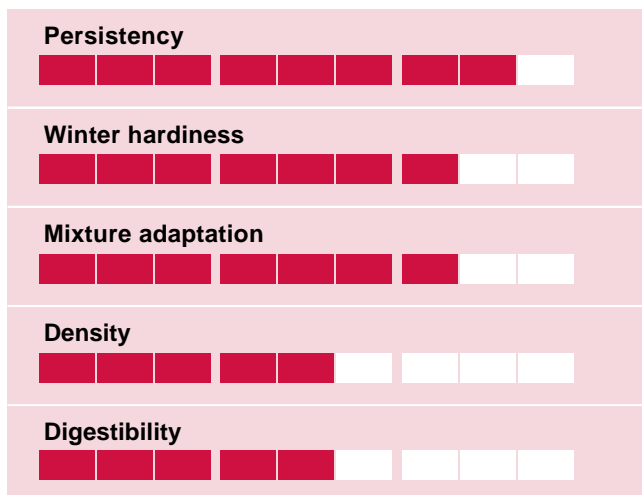

Tall fescue

Drought, cold and rust tolerant with good palatability

- Heat and cold tolerant
- Very good rust resistance
- Good palatability
- High total dry matter production

Ratings

Good palatability

With a score of 4.6 for palatability in French trials Tuscany is a good compromise for palatability and dry matter productivity.

High production all seasons

Tuscany produces high amounts of dry matter from early spring till late autumn; maintaining production even during dry periods.

Rust resistance

The rust tolerance of Tuscany is excellent.

Heading date

Tuscany is semi-late heading.

Relative drymatter yield
