

PELETON

Lolium westerwoldicum

Westerwold/annual ryegrass

A true "annual ryegrass"

- High DM production
- Very lodging resistant
- High forage quality
- Tetraploid genetics

Ratings

Allows late autumn sowings

The fast growth of PELETON allows late sowing in the autumn enhancing chance of successful establishment.

Good lodging resistance

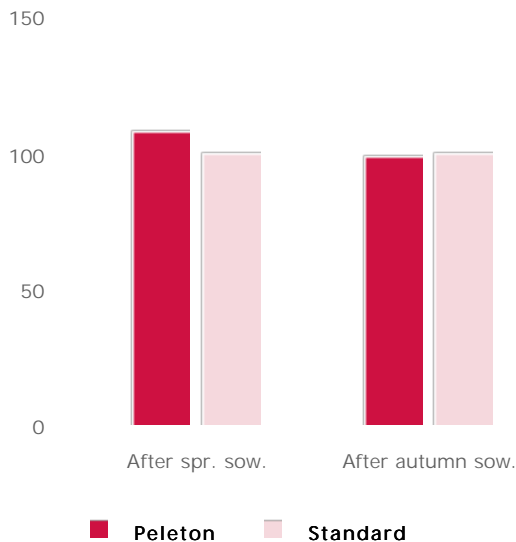

If harvest is delayed due to weather the good lodging tolerance will be highly appreciated. Quality in view!

Excellent production of drymatter

The total annual drymatter yield is very high and of very good forage quality.

Drymatter yield, standard average = 100
