

GRASS FIX

Turflin

GRASS FIX

Energise your lawn

- No wasted fertiliser – better for the environment
- The fertiliser feeds the seeds, not the weeds
- The grass seed gets a boost and grows into a lawn faster
- Less work – just one application does the job

Ratings

SeedBooster breathes new life into tired lawns

Gardeners no longer have to put up with patchy and threadbare lawns. Just one application of SeedBooster is enough to nurse your tired lawn back to health. SeedBooster is seed and fertiliser in one – a powerful shot of growth and energy that encourages a lawn to live its life to the full.

SeedBooster is vital first-aid for worn-out lawns. The combination of seeds and fertiliser energises a lawn for a season of lush green growth. You can sow SeedBooster into your lawn – 'overseeding' as professionals call it – and let nature take its course. The first green shoots are quickly visible, and before long the overseeded lawn will have grown into the thick green carpet it deserves to be.

Grow a healthier lawn, faster

SeedBooster works because each seed is wrapped in its own parcel of fertiliser. Those tiny packets of energy help the seeds germinate sooner and establish faster. A single application of SeedBooster generates up to 30% more grass and a denser lawn than by sowing seed and fertiliser separately. You grow more green lawn for less work – and you get there sooner.

Unwind and enjoy rest and recuperation

The less work you have to put into your lawn, the more time you have to enjoy it. Gardeners who like to relax lazing on a carpet of lush green growth should revive and re-energise their lawns now. Just one application of SeedBooster is all they need.
