# DUNE

*Cynodon dactylon*

**Bermuda grass**

Fast spring green & good fall colour retention

- Strong wear tolerance
- Cold tolerant
- Early spring green-up
- Quick establishment

## Ratings

**Colour**

**Red thread tolerance**

**Salt tolerance**

**Persistency**

**Fast establishment**

## New SEEDED variety

DUNE is a new and improved cold tolerant bermudagrass. Dune makes an attractive green turf that maintains its color through more of the year than many other bermudagrass varieties.

## Early spring green-up

Dune has demonstrated excellent early spring green-up and superior fall color retention. It has strong resistance to disease including leaf spot and spring dead spot. Dune is an excellent choice for most turf applications.

## Uses

DUNE was developed exclusively for low cut utilization in temperate sub-tropical climates where warm season grasses are adapted. Dune can be successfully utilized in full sun on home lawns, sports fields, parks and golf course tees, fairways and roughs.
