

BETHANI

Poa pratensis

Kentucky bluegrass

Perfect suited when high quality lawn is required

- Very high density
- Top ranked for fineness of leaves
- Medium green color
- Excellent leaf spot resistance
- Very good Red Thread resistance

Ratings

The best fineness and leaf density

The average Smooth stalked meadow grass is not very fine leaved, but BETHANI is now the most fine leaved variety on the list! The very high density and narrow leaves opens the door for use in parks and home lawns where a high visual merit is important.

The Fine leaves combined with very high density and medium green color makes BETHANI a perfect choice for lawns and parks!

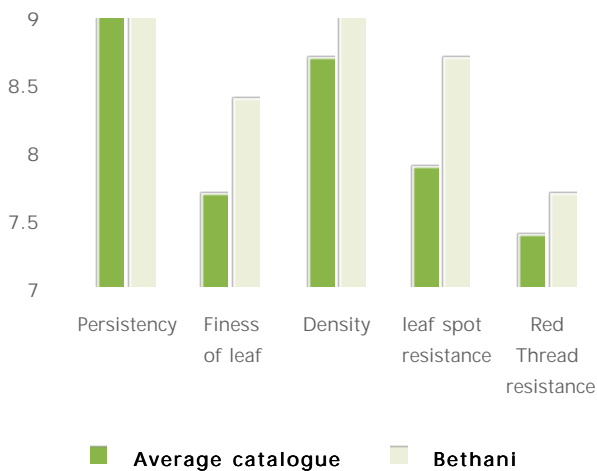

Excellent leaf spot resistance

Drechslera leaf spot is a frequent disease in turfgrasses, and in Smooth Stalked Meadow Grass in particular. The very high tolerance of BETHANI helps maintaining visual merit and playing quality. Drechslera is not only frequent, but can be present for weeks and months each year.
